

Implementation of physical barriers (jet-grouting, diaphragm wall)

With more than 40 years of operation in the market of projects and environmental consultancy, EBP has consolidated itself with the innovation in solutions for the mitigation of environmental liabilities. Several renowned engineering and civil construction activities in the national and international market have been incorporated to environmental projects.

Among the solutions adopted in environmental projects and successfully implemented we highlight the containment system consisting of a physical and hydraulic barrier executed through the Vertical Jet Grouting method, type CCP (Cement Churning Pile) associated with the implementation of deep horizontal drain (DHP).

EBP offers its customers customized solutions, including:

- Technical and economic feasibility study
- Technical advice and support in choosing technological partners for equipment supply.
- Management and technical supervision of the implementation ensuring compliance with technical and environmental specifications and standards
