

Viability Studies

The Viability study is always necessary at the development stage and is a mandatory document for obtaining financing. It is a fundamental tool to calculate the price of energy generated, as well as to evaluate its feasibility for captive generation.

The studies are prepared according to the client's needs and may include:

- Locational Feasibility Study
- Modeling and study of climate patterns
- Search and selection of suppliers
- Modelling of energy production
- CAPEX investment estimates
- OPEX operating costs
- Sustainability and environmental gains
- Calculation of the cost and price of energy
