

Removal of Contaminated Soils and Wastes

EBP Brasil has technical knowledge for the elaboration of a project and plan for the removal of residues and contaminated soils, which have the objective of establishing guidelines and technical methodologies for the feasibility of excavation, removal, cleaning activities, with environmental, safety, operational control and monitoring criteria.

The EBP Brasil team has vast experience in removal projects within saturated zones, and proposes solutions for cleaning contaminated groundwater, specific for each project, with adequate destination of contaminated water.

Procedure and safety measures are considered in the project, as service premises for the contractors. The procedures are designed to minimize environmental impacts in the work area in order to promote safety and health conditions for those involved.

Transportation and Disposal of Hazardous Waste, such as cargo control and audits at the receiving unit are items addressed in the project.
