

Remediation Project

In the contaminated areas rehabilitation process, remediation systems designed by EBP Brazil have been widely used by our clients. EBP Brazil, in addition to a dedicated and multidisciplinary team, has great experience in offering the best engineering projects. EBP Brazil's projects meet the most demanding clients and environmental agencies, whether in technical, economic or safety aspects.

EBP Brazil remediation projects follow the applicable rules and cover the concepts and details necessary for proper implementation and operation, with safety and confidence, containing:

- Sizing of the remediation system
- Techniques Description and components specification
- Engineering plants
- Mass balance and operating flows
- Safety and control measures
